

## CAKE Kalk OR/INK – Replacing the Dashboard

Tools Required:

- Torx T10 bit/driver
- 5mm Allen wrench

Step 1: Using a Torx T10, remove the 2 securing screws for the front bodywork lid. You do not need to disconnect the silver power button.

Step 2: Follow the cable coming off the back of the display unit to locate where it connects to the bike's main harness. Unplug.

Step 3: Using a 5mm Allen Wrench, remove the 4 securing bolts for the dashboard to remove it completely. Caution - The handlebars will be loose after this!

Step 4: Reverse the steps above to install the new one.

Complete!

Please do not hesitate to reach out with any questions or concerns before/during/after the process!

Thank you!
